ANSWER TO ARGUMENTS

In regard to applicants amendments to claim 13 to state that the low friction material covers the entire face of the plaster, applicant is directed to Thompson Col2 lines 1-7 where Thompson states that the covering on the plaster can vary according to the application that is being applied to. Given this broad teaching one of ordinary skill in the art would find it obvious to adjust the low friction covering on the plaster according to the application and for large areas to protect it would have been obvious to cover the entire plaster surface.

In regard to the modification of Thompson by Feret, Feret is primarily depended upon to teach that pressure sensitive adhesive is known to be used with low friction protection devices.
